PROFESSIONAL SUMMARY

Computer Science and Engineering student at Lund University (GPA: 3.8/4.0) with hands-on depth in C++ systems programming, 3D rendering, and algorithm design. Experienced working across multiple programming paradigms — including concurrent, functional, and object-oriented. Backed by strong coursework in data structures, concurrent programming, and computer communication.

EDUCATION

Lund University, Faculty of Engineering (LTH)

Lund, Sweden

Master of Science in Engineering, Computer Science and Engineering. GPA: 3.8/4.0.

Expected 2029

Relevant Coursework: Algorithms & Data Structures, Concurrent Programming, Functional Programming (Haskell), Object-Oriented Modeling & Design (Java), Computer Communication, Digital Circuit Design, Linear Algebra, Calculus

EXPERIENCE

Waiter, Bartender, and Kitchen Assistant

2022 – May 2026

AmaAB (University Kitchen)

Lund, Sweden

- Sustained reliable performance across concurrent responsibilities in a high-volume service environment, demonstrating multitasking, time management, and clear communication under pressure.

PROJECTS

C++ Black Hole 3D Renderer https://github.com/Javin2005/BLACKED_hole

- Built a 3D renderer in C++ simulating light-bending effects around a Schwarzschild black hole.
- Implemented ray tracing methods and numerical equations governing light propagation around massive bodies.
- Optimized performance through deliberate C++ memory management and purpose-built data structures.

Algorithm Lib: C++ Algorithm Laboratory <https://github.com/Javin2005/AlgoritmerLib>

- Developed a modular C++ library to implement and test fundamental and advanced algorithms from scratch.
- Leveraged modern C++ constructs including lambdas and templates; configured CMake for multiplatform builds.
- Built a template-based benchmarking timer to measure and tune performance across algorithm variants.
- Structured the codebase around Separation of Concerns, isolating algorithm logic from data handling and execution runners.

Sudoku Solver & Interactive Game (Java)

- Designed and implemented a recursive backtracking algorithm to solve complex puzzles, featuring a Java-based GUI.

SKILLS

Languages: C++, Java, Python, TypeScript, Scala, Haskell, CMake

Concepts: Algorithm Design (Graph Theory, DP, Network Flow), Multi-thread Programming, 3D Rendering, Complexity Analysis, System Architecture (Separation of Concerns), Functional Logic, Hardware-Software Interfacing

Tools: Git/GitHub, Linux, macOS, VS Code, LaTeX, Benchmarking
